# Maps Report

## Contents

**Metro Infrastructure**

**Long-Haul Infrastructure**

**Carrier Hotels**

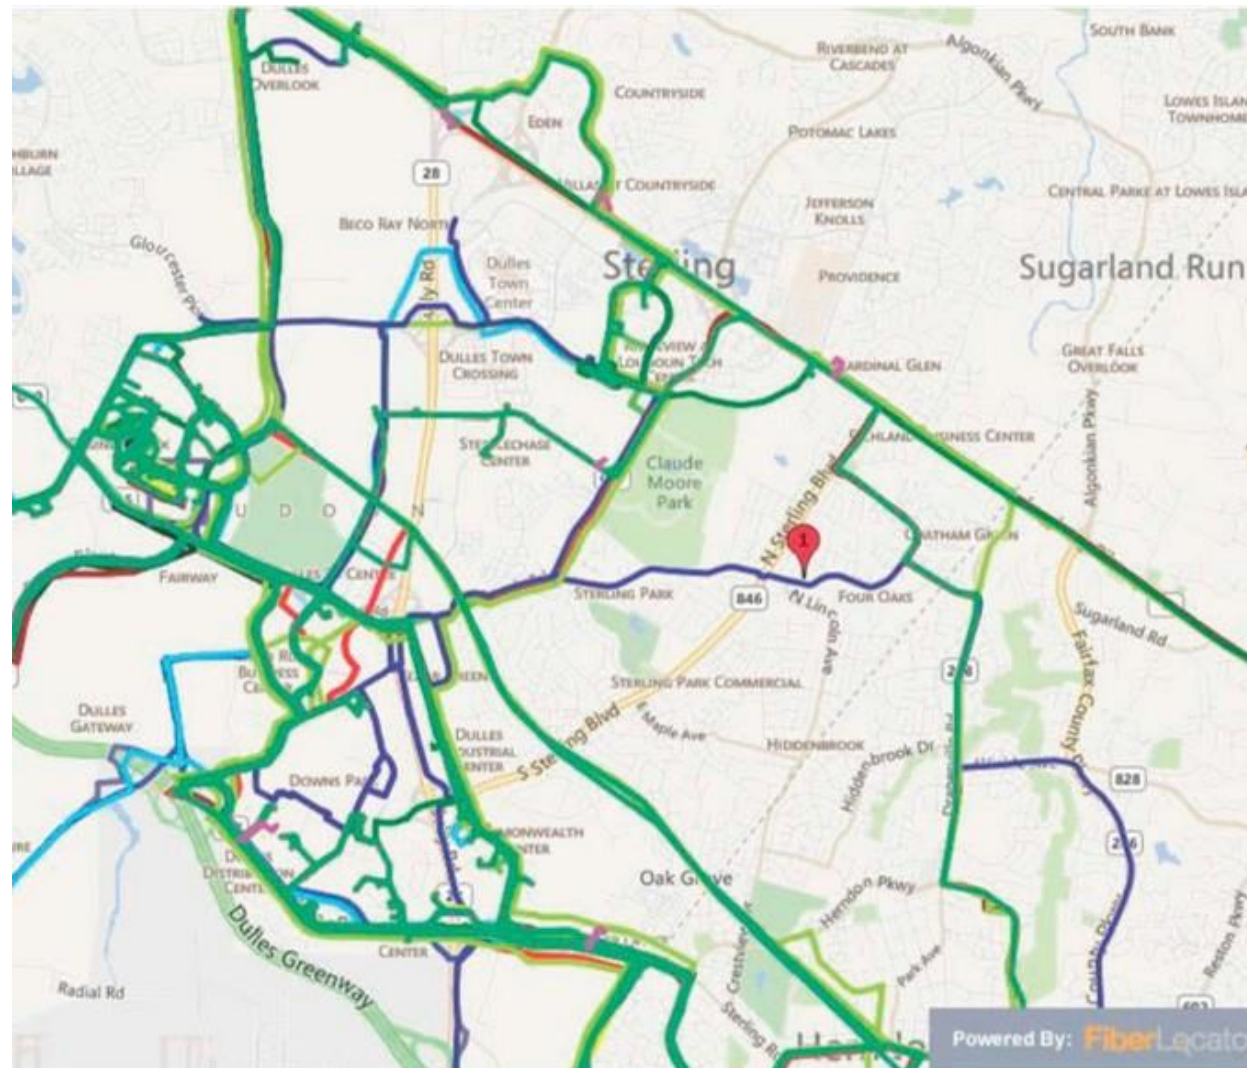

**Data Centers**

**Network Diversity**

**Ring to Carrier Hotel**

This report provides fiber maps and information pertaining to 23070 Shaw Road, Sterling, Va. The contents provide an overview of telecommunications infrastructure information for the area's carrier hotels, data centers and potential for network diversity.

# Background

### Metro Network Overview

Located in one of the most densely populated areas in the country for fiber infrastructure, the 23070 Shaw Road location in Sterling, Va., benefits from its proximity to data center hubs in Ashburn, Va., and the metro area's highly connected carrier hotels.

There is dense metro fiber infrastructure at the target address and the surrounding area. High-capacity optical services are readily available.

CarrierHotel Addresses:

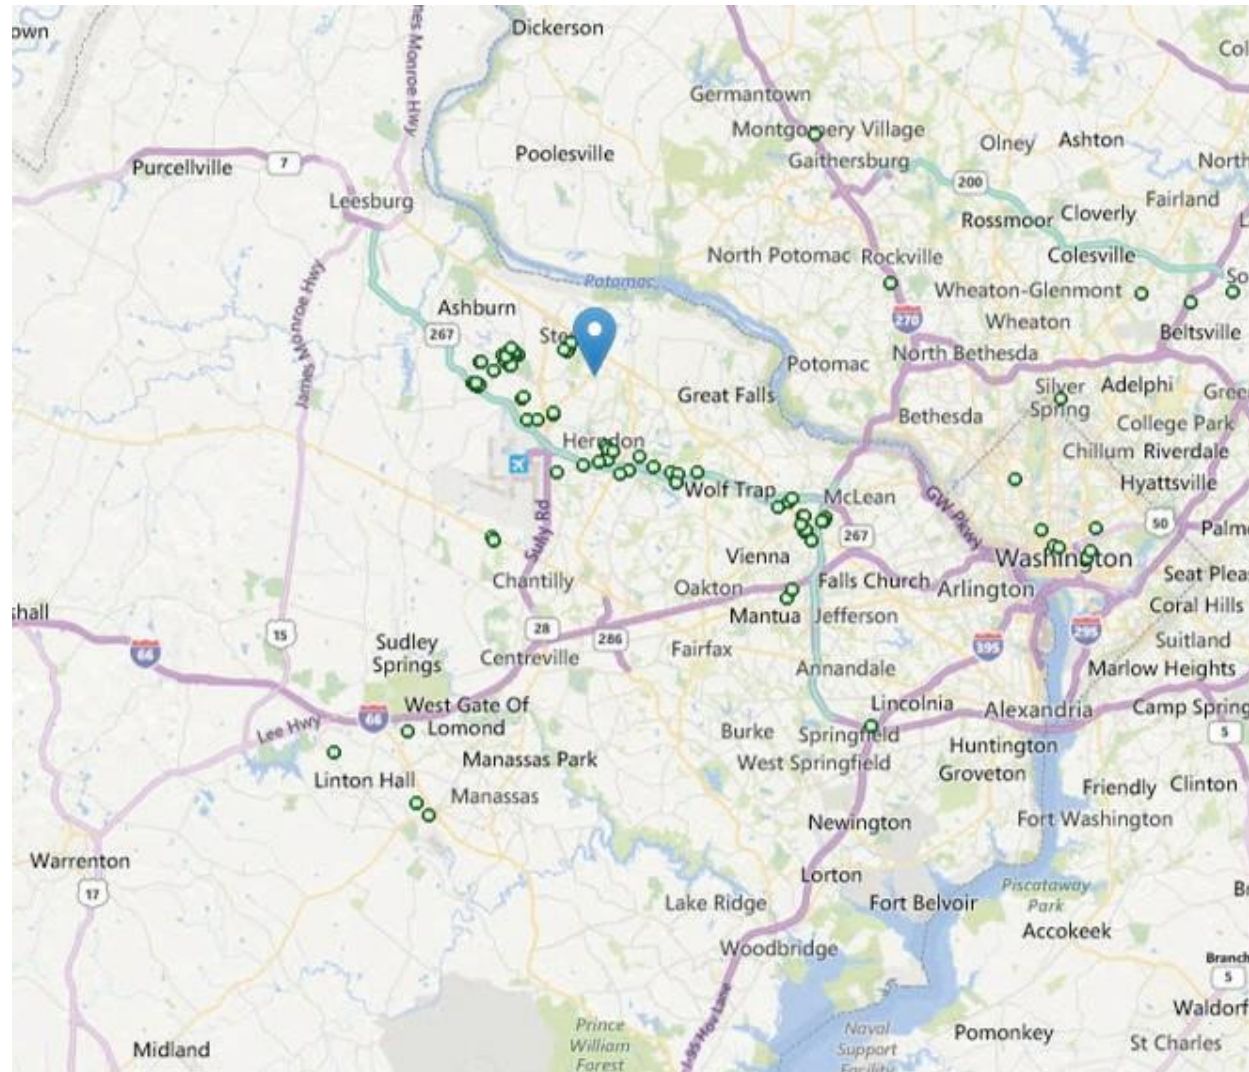

- 1275 K St., Washington, D.C.
- 21711 Filigree Court, Ashburn, VA

The carrier hotel locations in the Washington, D.C., metro area are two of the most well-connected facilities in the United States.

Carrier hotels serve as central traffic hubs within a metropolitan area. Most data, voice and video traffic passes through the carrier hotels. There are often several carrier hotel sites within a metropolitan area where networks meet and exchange traffic.

# Carrier Hotels

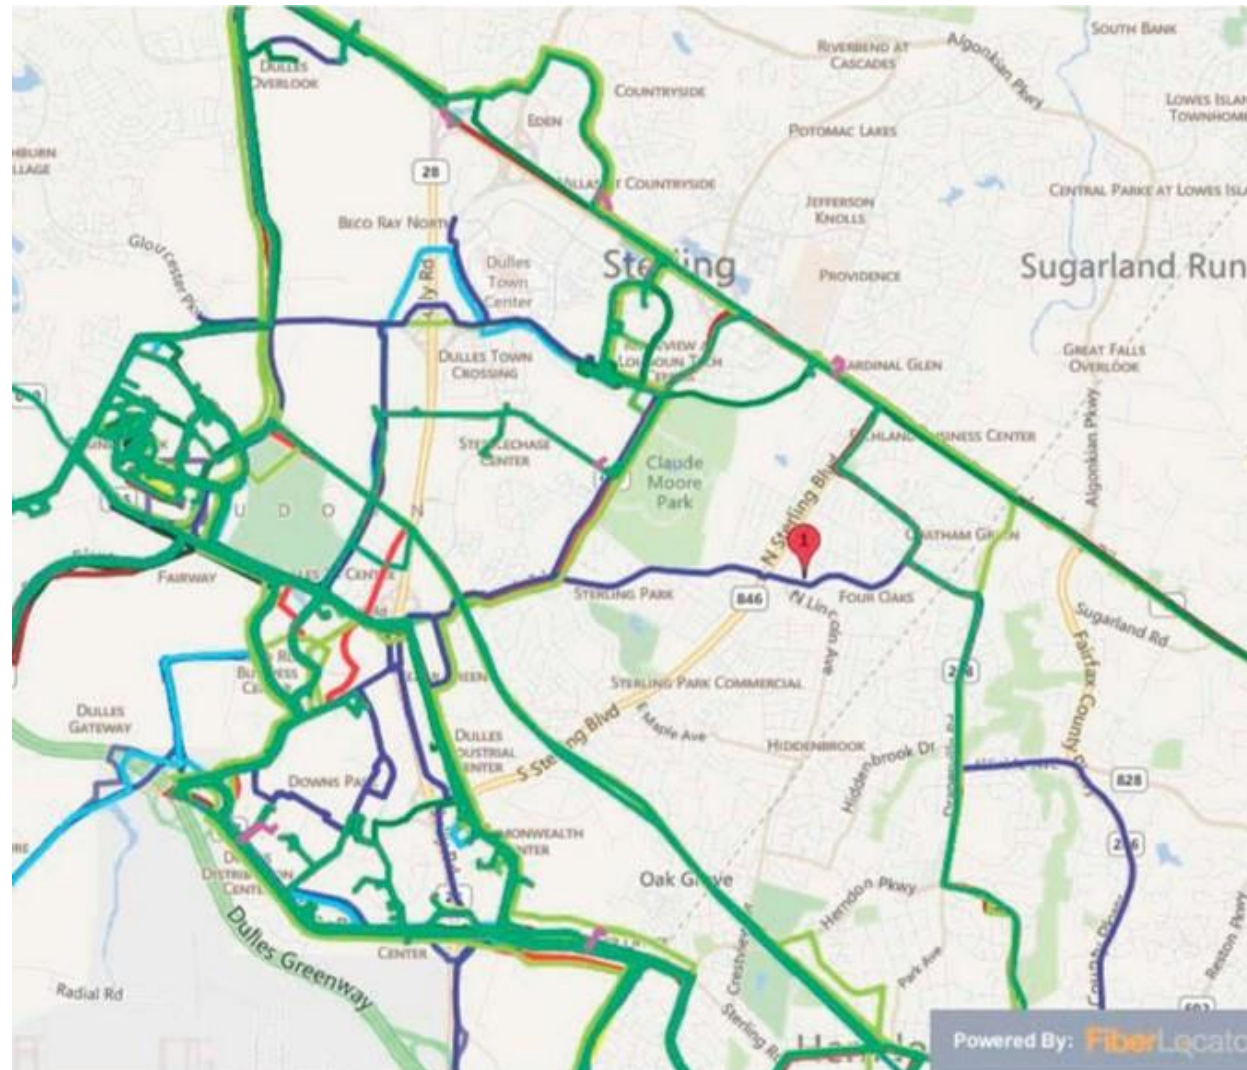

- 21711 Filigree Court, Ashburn, VA 20147 – Equinix
- 1275 K St., Washington, D.C. 20005 – Coresite
- 1175 Old Meadows Road, McLean, VA 22102 – Level3

# Data Centers

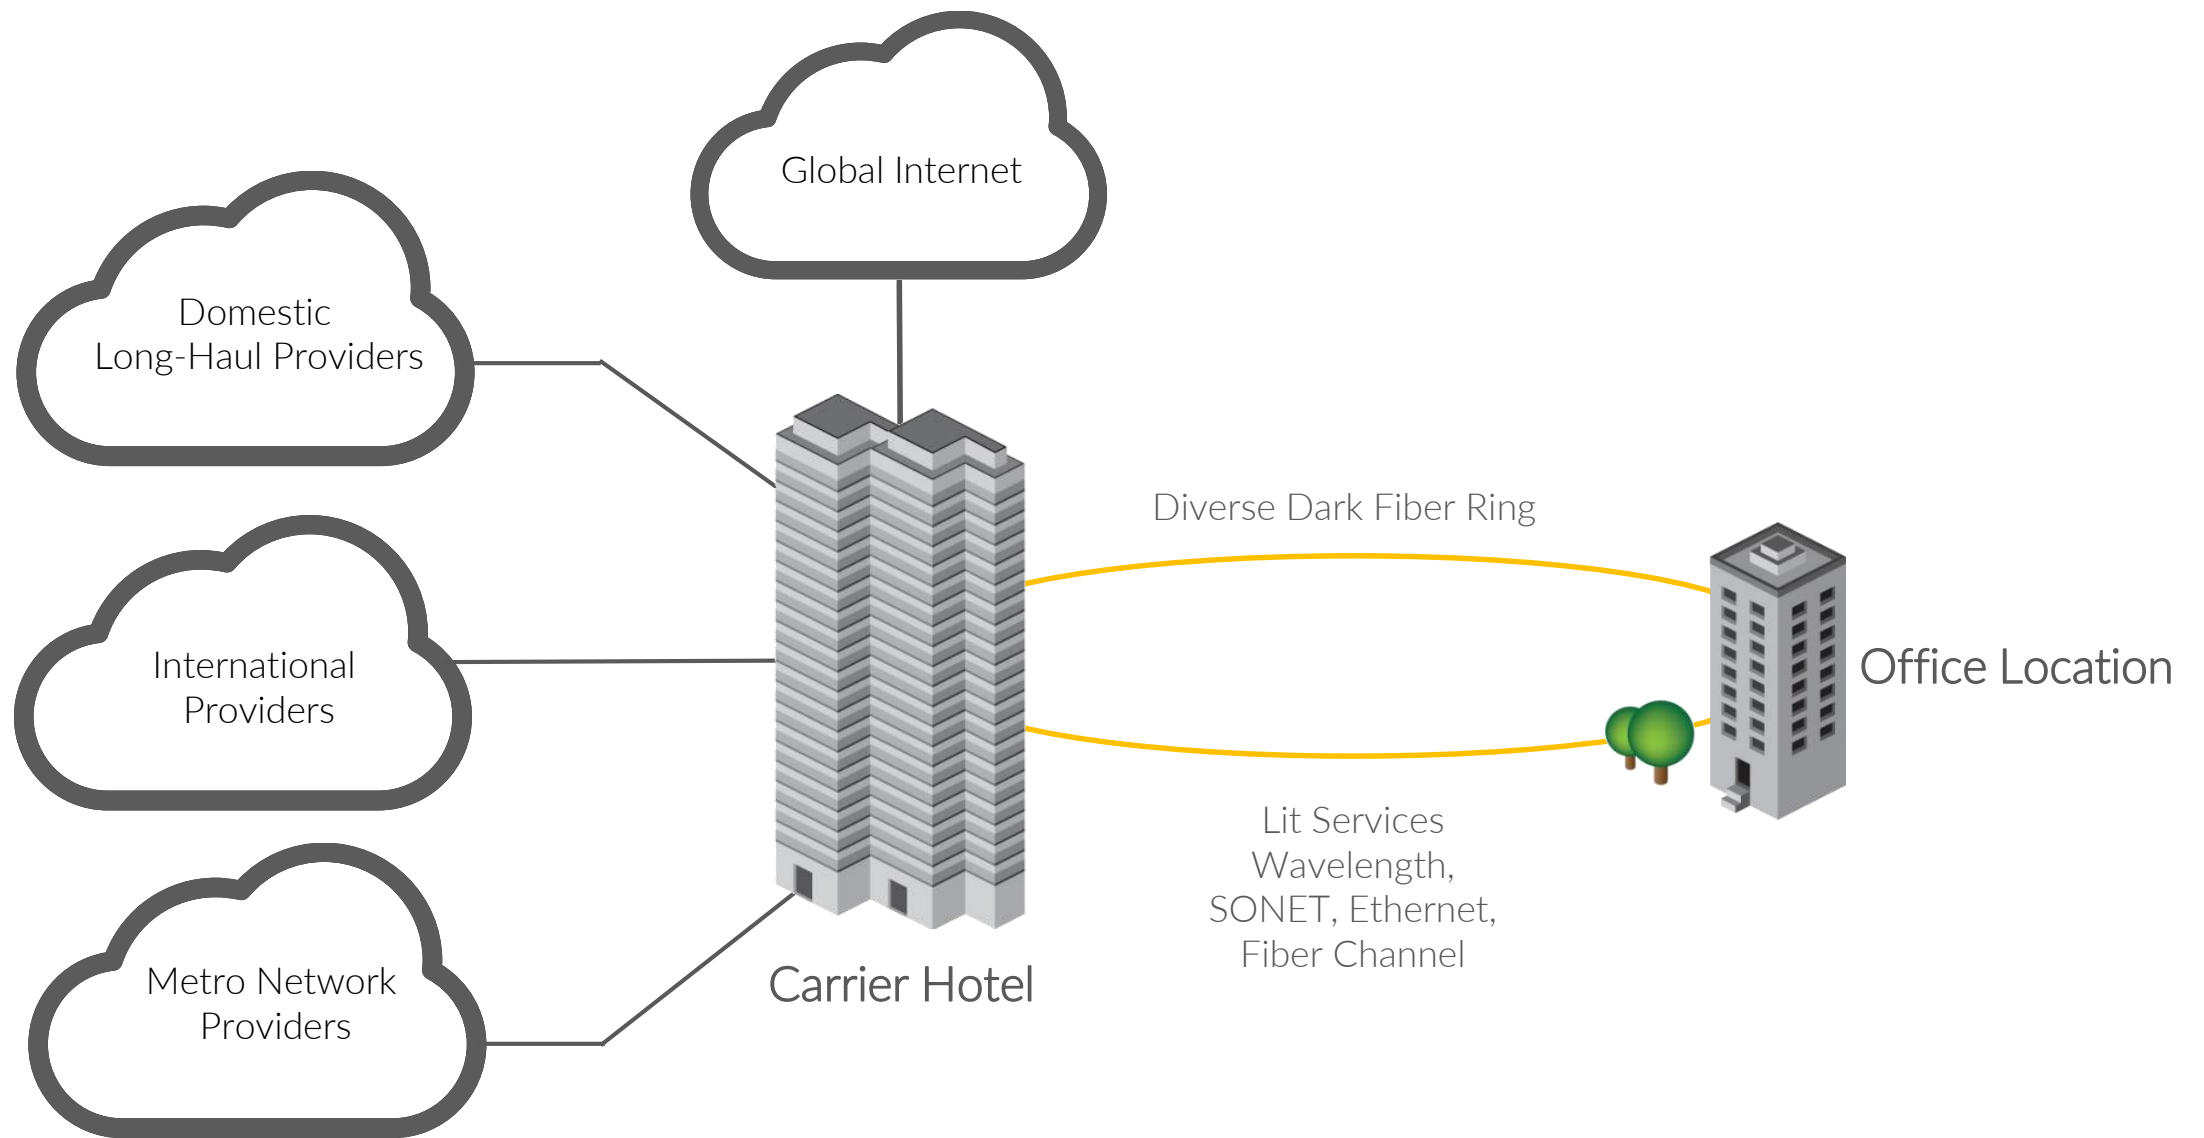

Thanks to plentiful long-haul and metro fiber infrastructure in the nearby area, **carrier and fiber path diversity can be created easily and cost effectively**, ensuring 23070 Shaw Road Sterling, Va., can access robust, cost effective high capacity network.

Network diversity is critical for ensuring services will remain in operation in the event of a systems failure. While many carriers in the metro area share common paths and some carriers operate by leasing fiber from other local providers, this location possesses the ability offer physical network path diversity and service provider diversity.

# Network Diversity

# Ring to Carrier Hotel

NEF utilizes its proprietary suite of database resources along with tribal knowledge and numerous industry relationships to provide no-nonsense assessments and provider-neutral recommendations, including the following:

- Pricing on available providers
- Physical and provider diversity
- Latency study
- Go/no-go recommendations on feasibility or availability
- Evaluations of telecom connectivity options for specific high-bandwidth applications
- Analyses of the viability of IT and network solutions, including cloud

NEF has created reports and research designed to help organizations make network infrastructure decisions, real estate investments and data center evaluations.

## About This Report

This data center validation is intended to provide an overview of the available providers and their metro- and long-haul networks at/near the location of interest. It contains a variety of maps and analyses of the infrastructure in the surrounding area, including carrier-specific routes, data centers and additional background information.

The information in this report is based on carrier-supplied records, in-house research and publically accessible data. The data and records have not been independently verified by New England Fiber, Inc. ("NEF"), and NEF makes no representations or warranties the information is accurate, up-to-date, complete or fit for the purpose for which it is required. NEF disclaims any liability for the use of this information and, to the maximum extent permitted by law, any liability for losses or damages through the use of this report. Third-party information is also referenced for convenience only, for which NEF does not express any opinion and disclaims liability for its use.
